Wart Disease Proves Menace

The potato industry of the country is endangered by a serious disease, new to us, called Wart Disease of Potatoes (insh) discovered in Pennsylvania in 1918, and believed possibly to be in other sections of the country. The disease, without doubt, came from Europe where it caused a severe shortage. In 1912 a strict embargo was placed on all importations of foreign stock, however, it is known that several cargoes entered some of our principal eastern ports immediately before the embargo went into effect. The disease necessitates a rigid quarantine for an indefinite period of time as a preventative measure against further infestation. It is especially desired that all potato users be watchful due to the fact that our first known infestation probably originated from imported table stock.

The disease is readily recognized by rough sponge outgrowths varying from the size of a pea to that of the tube itself being produced on the tubes especially at the eyes or at injured places. These outgrowths are brown at first but with age becomes black and rapidly decay causing soil infection by the spore (seed offungi) liberated in this manner. Soil infestation last for years. The disease does not affect the tops so watch while you plant or dig and report promptly and send specimens of suspicious cases to your county agent, your state experiment station (pathologist) or Plant Disease Survey, Plant Bureau, Washington, D. C.

A HOME-MADE PAPER.

THURSDAY, AUG. 28, 1919.

SUBSCRIPTION RATE,
ONE DOLLAR PER YEAR.

To the voters of Powell and Wolfe counties:

I am the Republican nominee for Representative from the 94th Legislative district composed of Powell and Wolfe counties. Am the same Sherman Robbins that made the race for Sheriff in the Republican primary in Estill county ten years ago, won the nomination and then resigned with the consent of the Republican county chairman. I solicit the support of all voters who want a fair deal and an honest representation at Frankfort.

Yours for success in November,
SHERMAN ROBBINS.

How a "Sucker" Was Saved

A city man got a very glowing circular from a Chicago "development company" offering him 10 acres of land in Florida for the surprisingly small sum of \$2,500—a "peanut unit" the circular called it. He could grow, the circular said, a thousand bushels of peanuts on his 10 acres and could sell the peanuts—allowing for low prices—at \$2 a bushel. The city man was impressed; but he sent the circular to the United States Department of Agriculture with a query as to whether or not the investment was a good one. Following are some sentences from the letter he got in reply: "The literature is of the kind designed to deceive city people in the North and West who do not know anything about farming." "The average return from 10 acres of peanuts would not exceed \$300 to \$500." "You could buy a 100-acre farm in almost any of the counties of western Florida, including the one mentioned in the circular, for the price these people ask for 10 acres." "The whole 'unit' system, whether it is pecans, peaches, figs, cane, peanuts, hogs, or what not, is simply a means of selling land at three to five times what it is worth to ignorant or unwary small investors." "To pay \$2,500 for this 10 acres of land would stamp you as a 'sucker' of the rankest class." "All this is without reflecting in any way on Florida, for it is a good State and lands are comparatively cheap there."
